

EUTROFIT®

ORGANIC NITROGEN FERTILIZER UNIVERSAL

Fluid blood - Leaf / Radical

Can be used on all crops: tree-herb-vegetable-fodder

Absolutely safe as far as sanitary and phytosanitary measures are concerned as it is heat-treated in accordance with provisions of the Health Regulations CE 1069/2009 and Regulations CE 142/2011 to ensure the elimination of all pathogens (Bacteria, bacilli, various viruses, etc..).

Nitrogen (N) total	4,00 %
Nitrogen (N) organic	3,70 %
Carbon (C) organic	14,00 %
Iron (Fe) organic	700 ppm

EUTROFIT® is an organic nitrogen fluid fertilizer derived from the processing of animal blood. Its special processing allows foliar distribution with a rapid and total foliar assimilation by the apparatus. It is a product with high yield studied to ensure the **maximum compatibility** with all herbal products. The **complete synergy** also **with cupric (without any sign of toxicity)** allows to provide the necessary growth stimulus for all phases of growth fundamentals.

EUTROFIT® GUARANTEES THE CROP THE STRONG PRESENCE OF NOBLE COMPONENTS THAT ALLOWS THE PLANT TO GET THE BEST PERFORMANCE:

- nutrients assimilation
- more profitable use of micro, meso and macro elements of fertility
- enhancement of the **organoleptic characteristics** of crops and increased conservation.

EUTROFIT® FURTHERMORE WE HAVE:

- increased production
- increased sugar content (Brix grade)
- increase in specific weight and protein content
- maximum uniformity of fruit size
- more intense colorations of fruits and vegetation
- Increased plant defence against adversity and seasonal diseases of different origin
- anti-stress (frost, transplanting and water stress) resulting in less drop of fruits
- carrying action and bio stimulant, improving the absorption and effectiveness of nutrients of the products to which it is associated
- Protection against iron chlorosis, due to the presence of assimilable organic iron, which favours the formation of chlorophyll, enhancing photosynthetic processes, with consequent benefit for the whole plant.
- less weight loss after storage in cold stores and more durability on the commercial circuit.

DOSES AND CONDITIONS OF USE:

EUTROFIT® is used for foliar normally in reason of **200-400 gr / hl of water or from 2 to 5 kg / ha** depending on the crop, distributed in multiple treatments, alone or with regular use of herbal remedies, thanks to the total compatibility with them, enhancing their effectiveness as action carrier, allowing also to reduce the use of these products. For example, associated with cupric, it forms a **PROTECTIVE LACQUER AND BREATHABLE** with a strong action of **BACTERICIDAL BARRIER**. To get **better answers** treatment is recommend even in fallen leaves and pruning and always in case of hail.
