

# ORGAZOT®

## ORGANIC NITROGEN FERTILIZER

### Controlled release granulate dried blood

### Can be used in all crops: tree-grass-vegetable-fodder

### A SLOW NATURAL TRANSFER

### AND HIGH AVAILABILITY OF ORGANIC IRON

Absolutely safe as far as sanitary and phytosanitary measures are concerned as it is heat-treated in accordance with provisions of the Health Regulations CE 1069/2009 and Regulations CE 142/2011 to ensure the elimination of all pathogens (Bacteria, bacilli, various viruses, etc.).

Nitrogen (N) organic	14,50 %
Carbon (C) organic	44,00 %
Iron (Fe) organic	2200 ppm

**ORGAZOT®** is an organic nitrogen fertilizer, derived from blood, in granulated form, of course, specifically designed to ensure a gradual and programmed release into the ground, in order to allow constant and complete root assimilation of nutrients during the production cycle.

The modern fertilization must, of course, be oriented to eliminate waste. Despite this quantitative and qualitative benchmarking is often overlooked. In this context the use of **ORGAZOT®** proved decisive and absolutely innovative. In fact, thanks to its production technology, with perfect sterilization, it provides excellent nutritional source avoiding unnecessary perfusion of nitrogen compounds in groundwater, in accordance with the increasingly stringent directives on nitrates and the vulnerability of the soil.

#### DOSES AND CONDITIONS OF USE:

It is advisable to use **ORGAZOT®** on cereals and vegetables (micro granules) at the time of sowing, mixed with seed distributed in the groove (starter function) to stimulate rooting.  
For vineyards and orchards (average granules) as winter fertilizer localized along the row.

**ORCHARDS:** 120-150 Kg/ha as fertilizer in autumn/winter  
**OLIVE:** 0,5-1 kg per tree  
**VINEYARDS FOR WINE:** 100-120 kg/ha located on the row.  
**VINEYARDS FOR TABLE GRAPES:** up to 200 kg/ha for high productivity  
**NEW PLANTING OF ORCHARDS AND VINEYARDS:**  
50-200 grams per plant 10-20 cm from the stem to accelerate the vegetative development  
**CEREALS AND LEGUMES:** 40-50 kg/ha seeding on the line  
**HORTICULTURALS:** 30 kg/ha on the transplantation row or sowing, 200-300 kg/ha as fertilizer background  
**POTATOES:** 300 kg/ha as fertilizer for background to meet all the needs of nitrogen, or 50 kg/ha to seed tubers to accelerate the development  
**SMALL FRUITS:** 300-400 kg/ha  
**TURF:** 20-40 kg per 1000 m<sup>2</sup> depending on the need  
**NURSERY:** max 0.5% in admixture with the peat
