

# Ungulate repellent

## Dosages

### EUTROFIT®RP REPELLENT AGAINST UNGULATES, HARES AND BIRDS

#### PROTECTION OF TREES FROM UNGULATES

Spray **EUTROFIT®RP** on the trunk of the tree and on the ground along the entire row of trees diluted in a 1-2% solution with water. Repeat every 10 - 15 days according to the density of the wild animal population and weather conditions.

#### PROTECTION OF ARABLE CROPS FROM UNGULATES

(or in all those cases where it is not possible to access the field every 10-15 days)

Spray **EUTROFIT®RP** on the ground around the perimeter of the field and along animal tracks, diluted in a 1-2% solution with water. Repeat every 10 -15 days according to the density of the wild animal population and weather conditions.

#### PROTECTION OF ARABLE CROPS FROM BIRDS

When the crop is sown (localised or scattered seed) spray **EUTROFIT®RP** on the ground diluted in a solution of 1-2% with water. This will help protect the seeds from bird damage (starlings and corvids) until germination.

#### OTHER SPECIFIC USES FOR PROTECTING CROPS:

#### CORN AND SOYA DURING WEEDING DURING PRE-EMERGENCIES

Add **15 kg/ha to 2-3 quintals** of water.

#### REPELLENT FOR CUTTINGS

Carry out a **normal treatment with EUTROFIT®RP at 0.4 - 0.5%** on the crop **as well as around the crop and along animal tracks using Eutrofit at 1-2%**.

#### REPELLENT FOR VINEYARDS

As well as the **usual leaf treatments at 0.3 - 0.4%** complete by **treating the trunk and the ground with EUTROFIT®RP at 1%-2%** while the first buds are sprouting (for ungulates) and while the bunches of grapes are ripening (for wild boar). **REPEAT EVERY 10-15 DAYS.**

**If there is a large wild animal population in the area, repeat treatment with EUTROFIT®RP from 1% to 3% around the perimeter of the crop and along tracks near the crop.**

### ORZAGOT® REPELLENT AGAINST UNGULATES, HARES AND BIRDS

#### FOR ALL CROPS

For long-lasting protection, place a number of containers around the crop (such as pot trays or canisters cut in half) at a distance of 50 metres from each other. Insert from 3 to 5 kg of **ORZAGOT® granulate** in each container and fill with water until the product is completely covered. This will provide a **repellent barrier which will last for AT LEAST 60 days without any leaching problems**. Every now and again, check the water level inside the containers. **N.B. During critical moments, we recommend adding 20 ml of EUTROFIT®RP to every container to accentuate the olfactory charge and reduce to a minimum the approach of wild animals.**
